

LOPEZ RESERVOIR STORAGE PROJECTION

**Notes:**  
 Reservoir Storage = Current Storage + Inflow - Outflow  
 Outflow = Agency Usage + Downstream Releases  
 Agency Usage: is based on 2010-2021 average monthly deliveries  
 Predicted Inflow: is dependent on the predicted rainfall obtained from longrangeweather.com  
 Inflow is affected by antecedent soil conditions and factored into the model. Rainstorms will produce less inflow during the dry months than during the rainy season when the soil is saturated.  
 The Storage Projection Model is based on a polynomial regression (concave in shape). The (concave) Storage Projection Graph will fall below the (linear) Storage Projection with No Rain Graph during months of low predicted rainfall.
